UNCERTAINTY ASSESSMENT FOR IPMVP

INTERNATIONAL PERFORMANCE
MEASUREMENT AND VERIFICATION
PROTOCOL[®]

July 2019

EVO 10100 – 1:2019

Table of Contents

1. Introduction	1
1.1. Statistics.....	1
1.2. Sources of Uncertainty	2
1.3. Systematic Error	2
1.3.1. Data Measurement	3
1.3.2. Data Collection	3
1.3.3. Data Modeling.....	3
1.4. Random Error	4
1.4.1. Definitions of Commonly Used Statistical Terms.....	5
1.4.2. Confidence and Precision.....	7
1.5. Sample Size Determination	11
1.6. Determination of Metering Period.....	13
1.7. Modeling.....	14
1.7.1. Coefficient of Determination (R^2)	15
1.7.2. t-statistic	16
1.8. Modeling Errors	18
1.8.1. Omission of Relevant Variables	18
1.8.2. Inclusion of Irrelevant Variables	18
1.8.3. Functional Form	19
1.8.4. Data Shortage.....	19
1.8.5. Autocorrelation.....	19
1.8.6. Prediction Errors	20
1.8.7. Overfitting.....	21
1.9. Combining Uncertainty.....	21
2. Option A: Lighting Efficiency	24
2.1. Situation	24
2.2. M&V Plan: Run Time Logging - Post Only.....	24
2.3. Savings	25
2.4. Sources of Error	26
2.5. Sample Design	26

- 3. Option B: Motor Replacement29**
 - 3.1. Situation 29
 - 3.2. Measurement Options and Measurement Error 30
 - 3.2.1. Power Metering, Pre/Post – Stable Loads..... 31
 - 3.2.2. Power Metering, Pre/Post – Variable Loads 32
 - 3.2.3. Power Metering, Post-Only 32
 - 3.2.4. Amperage Metering, Post-Only 33
 - 3.2.5. Run Time Logging, Post Only 35
 - 3.3. Example Option B M&V Plan 37
 - 3.3.1. Situation..... 37
 - 3.3.2. Assumptions 38
 - 3.3.3. Sample Design 39
 - 3.4. Combining Sampling and Measurement Errors 43
- 4. Option C: Whole Facility Regression-Based Savings Estimate45**
 - 4.1. Calculating the Precision of a Regression-Based Savings Estimate 45
 - 4.1.1. Forecast Model..... 45
 - 4.1.2. Use of an Indicator Variable for the Reporting Period 49
 - 4.1.3. Special Considerations for Interval Meter Data 51
 - 4.2. Managing Autocorrelation 51
 - 4.2.1. What is Autocorrelation? 51
 - 4.2.2. Diagnosing Autocorrelation..... 51
 - 4.2.3. Remedial Measures 55
 - 4.2.3.1. Omitted Variable Bias 56
 - 4.2.3.2. Misspecification 58
 - 4.2.3.3. The ASHRAE Correction 58
 - 4.2.3.4. Newey-West Standard Errors 59
- 5. Option D: New Construction of a Medium Office61**
 - 5.1. Situation 62
 - 5.2. Building Modeling and Analysis Tools..... 62
 - 5.3. Energy Model and Variable Characterization 63
 - 5.4. Local One-step-at-a-time (OAT) Sampling Analysis 65
 - 5.5. Bootstrap Based Analysis 68

List of Tables

Table 1. T-table Value of t-statistic at different confidence levels	10
Table 2. Sample Design.....	27
Table 3. Metered Hours and Estimated Savings.....	27
Table 4. Error Analysis	28
Table 5. Measurement Techniques and Sources of Error	37
Table 6. HVAC Supply Fans in a Hospital	38
Table 7. Supply Fan Saving Estimates.....	40
Table 8. Metered Pre and Post Supply Fan Consumption for 7 Sampled Motors	42
Table 9. Input Parameter Ranges for Energy Efficiency Measures	64

List of Figures

Figure 1. Types of Statistical Model Estimates 2

Figure 2. Scatter Plot of Monthly kWh and Average Air Temperature..... 46

Figure 3. Linear Regression Output for Baseline Period 46

Figure 4. Savings Calculation Example 47

Figure 5. Regression Output for Post Indicator Variable Example 50

Figure 6. Simple Linear Regression Output..... 52

Figure 7. Standardized Residuals Plotted Against Time..... 53

Figure 8. Independently Distributed Error 53

Figure 9. ACF Plot of OLS Residuals..... 54

Figure 10. ACF Plot of Random Error 54

Figure 11. Simple Linear Regression Output..... 56

Figure 12. Regression with Time-Related Indicator Variables 57

Figure 13. Misspecification 58

Figure 14. Regression Output 60

Figure 15. Lighting Power Density Distribution 64

Figure 16. Electric Equipment Power Density Distribution..... 65

Figure 17. Total Electric Use (kWh) Variation 67

Figure 18. Total Electric Savings (kWh) Variation 67

Figure 19. Range of Electric Savings..... 68
